annevk · November 2022

Goals

- Have an RFC that is suitable for all clients

    - Detail header parsing and serialization

    - Detail the Cookie Store

- Provide sufficient hooks for a variety of features in browsers

    - document.cookie

    - "Cross-site" cookie behavior

    - Clear-Site-Data: "cookies"

Exploration

- Do non-browser clients need a concept of "cross-site" cookies?

- Do non-browser clients have a concept of partitioning?

  - If not, should the RFC still be in charge of any related cookie attributes?

- Can we have opaque fields in the Cookie Store for "downstream" standards?

Thanks!
